Common applications:

- Push button enclosures
- Electronic and instrumentation enclosures
- Terminal enclosures and junction boxes
- Power distribution enclosures
- Krone enclosures
- D.O.L motor starter

Benefits:

- Easy machining with normal tools
- Easy colouring through pigmentation
- Low weight
- Good resistance to chemical attack
- Excellent insulating properties

About Mounting DIN Rails

- Most of the electrical accessories are designed to mount on rails that can be fixed easily on panel boards and equipments.
- Mounting rails made of steel in accordance (DIN 80715) are available in Zinc plated and thick film trivalent chrome passivated. The base metal as steel used for DIN rails as per EN10130. Due to high mechanical strength & durability, high corrosion prohibitive plating and lead free (Confirms to RoHS compliance) provides the best solution for general applications.
- These rails are often used as grounding bars. The current carrying capacity of these rails and the copper wiresizes required to carry that current are given below.
- The 35/7.5 high rail is suitable for the majority of application and is the more cost effectiveness.
- When heavy components like large PLC's, Transformers, MPCBS, heavy contactors and relays has to be mount than 35/15 rail is more suitable.
- The 15/5.5 rail is more than half width of 35/7.5 is used for mounting of terminal blocks in confined spaces.
